

Commercial-Scale Decarbonization with Clean Earth Renewables

Featured Subscriber Spotlight

FirstService Residential represents America's largest multi-family property manager. A long-standing condominium tower managed by FirstService Residential in the West Loop neighborhood of Chicago chose Clean Earth Renewables to unlock **\$5,280 in annual savings** via a community solar subscription for their utility bill covering the common areas of the property. Community solar allows residents, businesses and enterprise organizations to **access clean energy and electricity savings** without the need to purchase or install on-site solar panels.

Clean Earth Renewables represents the **largest operating fleet of community solar projects nationwide**.

This amount of generated clean energy is equivalent to over 83 homes powered annually.

The **impact** is in the **data**

\$5,280 in annual savings from on-utility bill credits generated from the community solar subscription.

12,000,000 kWh of renewable energy for FirstService Residential over a 15-year period.

10,577 tons of carbon dioxide avoided through the added generation of FirstService Residential's clean energy needs.

FirstService Residential lowered scope 2 emissions and electricity costs at their Columbia, Illinois hotel via a community solar subscription, at no cost to them.

FirstService Residential annual electricity consumption is matched at a local community solar project that distributes clean energy to the local utility grid, where they enjoy a share of energy savings of up to 10%.

To learn how to lower your business's scope 2 emissions, and electricity costs at no risk, contact us or visit our website to speak with a representative of our team.
